

## Report to Council

**Report Number:** REP-WS-04-2025

**Subject:** 2024 drinking water and wastewater annual reports

**Date of the meeting:** March 24, 2025

**Prepared by:** Nicholas Pigeon, Director of Water and Wastewater

**Circulated to and/or collaborated with:** n/a

**Approval:** Pierre Leroux, Chief Administrative Officer

*In agreement with the recommendation based on the contents of this report.*

## **Recommendation**

That Council receives following 2024 drinking water and wastewater annual reports.

## **Financial Considerations**

n/a

## **Context**

In line with provincial guidelines, the water & wastewater department annually submits detailed water and wastewater reports to the Ministry of the Environment, Conservation and Parks (MECP). These reports, which are essential for regulatory compliance and public transparency, outline our treatment facilities' operational performance and adherence to environmental standards. They are readily available to the public, ensuring that residents are informed about the quality and management of their water and wastewater services.

The Nation Municipality operates two drinking water systems and five wastewater facilities.

The following reports covers the period from January 1 to December 31, 2024.

## **Report**

### **Drinking Water Systems**

The Annual Report for the Limoges and St-Isidore Drinking Water Systems includes:

- A summary of the systems' compliance with applicable legislation and regulations.
- A description of any adverse water quality incidents and the corrective actions taken.

Additionally, the Summary Report provides:

- The quantities and flow rates of water supplied to consumers served by the Drinking Water System, including monthly averages.
- A comparison of these values to the system's rated capacity to ensure compliance with regulatory requirements.

### **Wastewater Facilities**

The Annual report for Limoges, St-Albert, St-Isidore, Fournier and St-Bernardin Wastewater Facilities includes:

- Volumes and daily flow rates of wastewater
- Results of raw sewage and final effluent parameters
- Summary of operation and environmental challenges
- Maintenance and calibration of monitoring equipment.
